Dear hiring manager,

I would like to introduce myself for an open application as an intern for a computational biology or bio-informatics position. I am eager to begin my career in the pharmaceutical industry and learn and perform the technical duties of the position to the best of my abilities.

I am currently doing a minor in pharmacogenetics as part of my bio-informatics major at the Hanze Hoge school. Although I am well rounded in my technical abilities in development I am drawn to the research side of bio-informatics, especially in the pharmaceutical space. I feel like your company's places prominence in similar areas and having the privilege of serving as an intern would greatly increase my learning opportunities while contributing to the advancement of medicine.

Throughout my study I found that the emphasis has been on making solutions and models as complex and intriguing as possible, neglecting the biological question at hand. That is why I am currently focussing on the specific biological subjects that interest me to really be able to make a cross-section between biology, computer science and statistics, hopefully making me an all rounded bio-informatician.

Although far in the future, I would like to become a Ph.D. holder in the field of computational biology and doing research at a company like yours. I believe with the right opportunities and experience working with scientists and others in the industry, I can achieve that goal.

Thank you for your time and consideration, and I would like the opportunity to discuss the possibility of an internship. For any further information I would like to refer to the accompanied cv or don't hesitate to reach out to me by mail or phone.

Sincerely,

Keimpe Dijkstra
